EDUCATION

Khon Kaen University - College of Computing

May 2023 - Present

Third-year undergraduate student | GPA : 3.33

Relevant Course : Web Programming and Application, User Experience Design, Principles of Software Design and Development, System Analysis and Design, Database Management System and Database Design, Software Engineering , Programming for Mobile Application

Career Focus : Full Stack Developer (Frontend — Advanced | UX/UI — Strong, User-Centric | Backend — Developing)

INTERNSHIP EXPERIENCE

INFRA CORPORATION

May 2026 - June 2026

Frontend (Applied) | Backend (Additional) — Environmental Protected Area Impact Assessment System

Developed a web application for preliminary impact assessment of construction projects or structures that may affect environmentally protected areas under the Office of Natural Resources and Environmental Policy and Planning (ONEP)

- **Frontend Development :** Developed the frontend based on the team's UI/UX designs and contributed to improving interface usability by providing feedback and suggesting design adjustments when the original design could be inconvenient or less user-friendly for users. Used **React**, **React Hook Form** and related frontend technologies.
- **Backend Development :** Participated in backend development for the first time, gaining hands-on experience in understanding system logic, developing APIs, and integrating frontend and backend services using **NestJS**, **Axios**, **Zod**, **Swagger** and **TypeORM**.
- **Additional Technical Experience :** Gained hands-on experience with **PostgreSQL**, **PostGIS**, **Redis**, **MinIO**, **Docker**, **MapLibre**, and **TanStack Query**, expanding my understanding of web application development across databases, geospatial data, infrastructure, and system integration.

PROJECT EXPERIENCE

Industrial PPE Detection System — DTech

Developed an industrial PPE detection system that integrates fine-tuned AI models with a custom-built web application to support real-time safety monitoring through on-site cameras.

- Designed and developed the UX/UI and Frontend of the web application using **React**, **TypeScript**, **Vite**, and **Tailwind CSS**, focusing on camera management, Live Preview, alerts, and workflows for industrial staff. Conducted research and gathered supporting information to guide system and interface design decisions.
- Improved and integrated pre-trained **YOLO** models by further training them with project-specific data to enhance PPE detection performance, then integrated the trained models into the developed web application for real-time detection.
- Later expanded responsibilities into Backend Development, contributing to the **FastAPI** backend using **Python**, **SQLAlchemy**, and **Alembic**, and working with Docker/Docker Compose to support the AI detection service and overall system architecture.

Clinic Doctor Appointment System — Doctora

Developed a doctor appointment booking system for an after-hours clinic, supporting both web and mobile platforms.

- Built the backend using **Spring Boot** (as required by the course instructor) , with the web frontend created using **Next.js** , **TypeScript** and **Tailwind CSS** , while the mobile application was built with **React Native**. The system utilizes **PostgreSQL** for data management and implements **JWT Authentication** for secure access.
- Served as **Frontend Developer and UX/UI Designer**, responsible for low-level UX planning , defining user workflows , creating UX/UI prototypes using **Figma** , and implementing the complete web frontend using **Next.js** , **TypeScript** , and **Tailwind CSS**.

Carpooling & Ride-Sharing Web Application — Ride

This project was completed as part of a Software Engineering course aimed at providing hands-on experience in Agile development. The team built upon a senior fourth-year project called PaiNumNae and, during Sprint 1, selected key Product Backlog items to fully redesign the entire system.

In this project, I served as both a **UX/UI Designer** and a **Frontend Developer**.

- Led the complete **UX/UI redesign process**, creating user flows, wireframes, and high-fidelity designs using **Figma**
- Responsible for developing all **frontend** features using **Nuxt.js**, **Vue.js**, **Tailwind CSS**, **Vite**, **JavaScript**, and **TypeScript** with a focus on responsive design and modern user experience.

TECHNICAL SKILL

- **Frontend :** HTML5, CSS3, JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Vue.js, Nuxt.js, Bootstrap, Vite, TanStack Query, Axios, React Hook Form, Zod
- **Backend & API :** Node.js, NestJS, Express.js, TypeORM
- **Database & Storage :** PostgreSQL, PostGIS, Redis, MinIO, Multer, Sharp
- **UI/UX & Tools :** Figma, Canva, Git, GitHub, VS Code, Docker, Vercel

LANGUAGE

- Thai : Native
- English : Intermediate – able to communicate in basic conversations and read technical documentation
