

KRIT INTARAJINDA

088 572 5273 | krit.in@kkumail.com | github.com/4mpcln | www.krit.info

PROFESSIONAL SUMMARY

Full Stack Developer and College of Computing student with practical experience in frontend development, UX/UI design, backend development, and full-stack project work. Skilled in creating responsive, user-centered web applications, translating design ideas into usable interfaces, and supporting system implementation through research, prototyping, API integration, and collaborative development.

INTERNSHIP EXPERIENCE

INFRA CORPORATION

Frontend (Applied) | Backend (Additional) - Environmental Protected Area Impact Assessment System

May 2026 - June 2026

- Developed a web application for preliminary impact assessment of construction projects or structures that may affect environmentally protected areas under the Office of Natural Resources and Environmental Policy and Planning (ONEP).
- Developed frontend features from the team's UI/UX designs and improved interface usability by suggesting adjustments when the original design could be inconvenient or less user-friendly.
- Participated in backend development, gaining hands-on experience in system logic, API development, and frontend-backend integration using NestJS, Axios, Zod, Swagger, and TypeORM.
- Worked with PostgreSQL, PostGIS, Redis, MinIO, Docker, MapLibre, and TanStack Query, expanding practical understanding of databases, geospatial data, infrastructure, and system integration.

PROJECT EXPERIENCE

SHORTEN URL AND QR CODE MAKER - QLEAN

First independently developed full-stack project

- Independently developed QLEAN from concept to deployment, designing the logo, system workflows, and all functionality for URL shortening and QR code generation, including a personal link library, visit analytics, and optional access-code protection.
- Designed and developed the UX/UI and frontend using React, TypeScript, and Vite, enabling users to organize links into folders and tags, customize QR codes, and export reports.
- Built REST APIs using Node.js and Express with PostgreSQL and Redis, implemented JWT authentication and request validation, and configured Docker Compose for local development and Vercel for deployment.

INDUSTRIAL PPE DETECTION SYSTEM - DTECH

AI-assisted safety monitoring web application

- Developed an industrial PPE detection system that integrates fine-tuned AI models with a custom-built web application to support real-time safety monitoring through on-site cameras.
- Designed and developed the UX/UI and frontend using React, TypeScript, Vite, and Tailwind CSS, focusing on camera management, live preview, alerts, and workflows for industrial staff.
- Improved pre-trained YOLO models with project-specific data, integrated trained models into the web application, and contributed to the FastAPI backend using Python, SQLAlchemy, Alembic, and Docker Compose.

CLINIC DOCTOR APPOINTMENT SYSTEM - DOCTORA

Doctor appointment booking system for web and mobile

- Developed a doctor appointment booking system for an after-hours clinic, supporting both web and mobile platforms.
- Built the backend using Spring Boot as required by the course instructor, created the web frontend using Next.js, TypeScript, and Tailwind CSS, and supported the mobile application with React Native.
- Served as Frontend Developer and UX/UI Designer, responsible for UX planning, user workflows, Figma prototypes, and complete web frontend implementation.

CARPOOLING & RIDE-SHARING WEB APPLICATION - RIDE

Software Engineering course project

- Completed as part of an Agile Software Engineering course by building on a senior fourth-year project and redesigning key product backlog items during Sprint 1.
- Led the complete UX/UI redesign process, creating user flows, wireframes, and high-fidelity Figma designs.
- Developed frontend features using Nuxt.js, Vue.js, Tailwind CSS, Vite, JavaScript, and TypeScript with focus on responsive design and modern user experience.

EDUCATION

- **Khon Kaen University - College of Computing** | Fourth-year undergraduate student | GPA: 3.33
- Relevant courses: Web Programming and Application, User Experience Design, Principles of Software Design and Development, System Analysis and Design, Database Management System and Database Design, Software Engineering, Programming for Mobile Application.

TECHNICAL SKILL

- Frontend: HTML5, CSS3, JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Vue.js, Nuxt.js, Bootstrap, Vite, TanStack Query, Axios, React Hook Form, Zod.
- Backend & API: Node.js, NestJS, Express.js, TypeORM, FastAPI, Spring Boot.
- Database & Storage: PostgreSQL, PostGIS, Redis, MinIO, Multer, Sharp.
- UI/UX & Tools: Figma, Canva, Git, GitHub, VS Code, Docker, Vercel.

COMMUNICATION

- Thai: Native
- English: Intermediate – Able to read technical documentation and communicate in English
